1. Private data member (radius)
2. A constructor must have the same name as the class.
3.
 - Private accessible only within class
 - Public accessible from anywhere
4. If it's private it is invalid
5.
 - Roo
 - x
 - getX()
 - setX(int z)
 - factor()
 - Roo()
 - 4
6.
 - Class is a template for coding objects
 - Objects are instances created from a class.
9.
 - "z" is the constant
 - "x" and "y", their variables can change
 - "y" is an instance member
 - "x" and "z" are class members
11. Overriding = a subclass provides it's own version of an inherited method
Overloading = multiple methods in the same class share a name but have different parameters
