

2

```
"int[] quantities = new int[20];"
```

```
"double[] heights = {1.65, 2.15, 4.95};"
```

```
"for (int grade = grades)
{
    System.out.println(grade);
}"
```

Passing an entire array sends all the elements in the array.

Passing a single element only sends one value.

Offset indexes are needed because the array indexes begin at 0

```
"I"
```

A class list where students can be added or removed

The indexOf() uses the objects equals() method

Wrapper class objects are compared using the equals() method.
